Sevethsense Technologies (7thsense) provides cutting edge IT solutions to Fortune 500 Corporations. Our mission is to enhance the competitive position of our clients by equipping them with state-of-the-art IT solutions and continuously providing them with value-added services and support.

Sevethsense Technologies is a niche service provider in business software, serving many customers worldwide with deployment of solutions in more than 900 locations. These customers include both large enterprises and midsize companies. Along the way, Sevethsense Technologies has accumulated a unique knowledge base of best business practices, including both cross-industry and industry specific practices that are used in the solutions. The Sevethsense Technologies tradition of leadership continues with a new generation of software that gives your company unprecedented speed and flexibility to improve your bottom line by improving planning across your enterprise.

INDUSTRY PAIN POINTS:

- Tracking of Sales by Outlet, by Shift, by Counter, by Sales Agents, etc.
- Ability to maintain Sale Price for an Item by Sale Type
- Data synchronization between Outlet and Central System either Online or End of Day upload
- Pricing update to all shops from the Head/Central Office
- Visibility of Stock at Central Office and Outlets; Fast & Slow moving items
- Work-flow of Items request and Supply between Outlet and Central System
- Multiple Form of Payment – Cash, Credit Card, Voucher, etc.

OVERVIEW OF PURLYNT RETAIL POS SOLUTION:

Purlynt Retail POS solution is an end-to-end operations system specifically designed in alignment with Retail Industry processes covering Procurement, Supply Chain and Sales Processes. The Retail POS is available both as a Desktop and hub-and-spoke deployment. When deployed centrally with outlets connected through web-access, it supports synchronization of Outlet data with Central Office. The key features available in Purlynt Retail POS system can be summarized into the following distinct Retail POS Enablement processes:

ITEM & PRICING CONFIGURATION: Each product is defined as an item and sale price can be defined at the Central Location. Item pricing module will have facility to define the sales price at each item level and for each location or combination of locations. This definition is done at the Central Location and is synchronized with each Outlet level POS module. Item pricing can be updated through central and desktop system. Feature is available to define discount element and its applicability clauses.

STOCK TRANSFER: Items required at the outlets are captured through Item request screen at the outlet level which goes as request to Central Stores. Items are issued against the Requests and link is maintained in the Warehouse/Stores Module at the Central location. Receipt screen at the outlet level helps to capture the information of received items which automatically updates the stock at the location.

POS SALES & PAYMENT: Customer picks up the purchase item from rack / collects from sales staff and goes to sales counter with purchase item for billing. Cashier scans the purchase item, once scanning is over; system generates total sales value of transactions. Customer pays by Cash, Card, and Vouchers. The sales transactions end with paid status. Sales transactions can be updated through Barcode, Touch screen or manual entry methods. If required, Cashier can hold and recall the sales transactions.

DATA SYNCHRONIZATION: In those locations where there is a bandwidth or connectivity issue, there will be a facility to store the transaction data for the day and the same can be integrated with Central Instance on a daily basis at the end of the day operation. It can be automated through schedule process. Integration with the Central Instance at a high level happens on the following:

- Receipt of items in POS against delivery from Distribution Centre.
- Sales & Sales return details.
- Finished goods with price details

STORE CLOSING: System supports to close the sales at each shift or for the day. If there is a requirement for both the options, it is possible to enable.

KEY FEATURES

The Purlynt POS offers features that are in alignment to the Retail Operations and Point of sale processes with ease and convenience.

- An integrated system-enabling user to access various functions based on rights.
- User screen access rights can be controlled through user privilege setup. Rights can restrict up to action level like Write / Update / View the record.
- Facilitates to find category and sub category of item through item number.

- Helps to split single invoice in to multiple.
- Facilitates to capture sales return.
- Easy to track the pending bills.
- Bills can be settled through Cash, Card, and Vouchers as well as multiple currency and multiple credit cards.
- Facilitates to recall the hold sales.
- Different item pricing can be done for Dine in, Delivery, and parcel orders of single item.
- Helps to map group of employee with special discount pricing of product.
- Facilitates to closing the store by automatic at end of the day on scheduled timings
- Sample Report Types: Sales Trend; Cash and Card payments summary; Store Wise, Shift Wise, Stock Wise, Sales Agent Wise and Consolidated Daily sales summary (DSR); Sales Analysis report; Product category based sales summary; Daily and Shift Wise Stock Summary; Pending Bills report; Fast and Slow Moving Item; Statistical reports etc.

Retail POS Process Flow

Purlynt Retail POS module integrates a complete retail sales process starting from item creation to till Sales & Payment receipt in single login. Customer goes to sales counter with purchase item for billing, Cashier scan all purchase items using barcode reader that system keeps an running total of item scanned, it indicates all has been entered then cashier generates total price for the transaction. Customer pays cost of transaction by cash / Card / and Voucher. Cashier enters amount received from customer to the system, it indicates total has been paid after that cashier prints the receipt of transaction and hands over receipt to customer
